THE LIGHT CURVE OF RU CAMELOPARDALIS DURING THE PERIOD
OCTOBER 1969 - AUGUST 1970

After the recovering of its periodic variation in September 1968 and the subsequent progressive amplitude reduction with the minimum in April, May, 1969 (B. Szeidl, Commission 27 Circular N°385) we see that the cyclical variation of the light amplitude continues. It reaches its maximum in October 1969, afterwards it decreases again to the minimum during the late summer 1970.
